1. Given the function

$$f(x) = -7x^2 + 3x^3$$

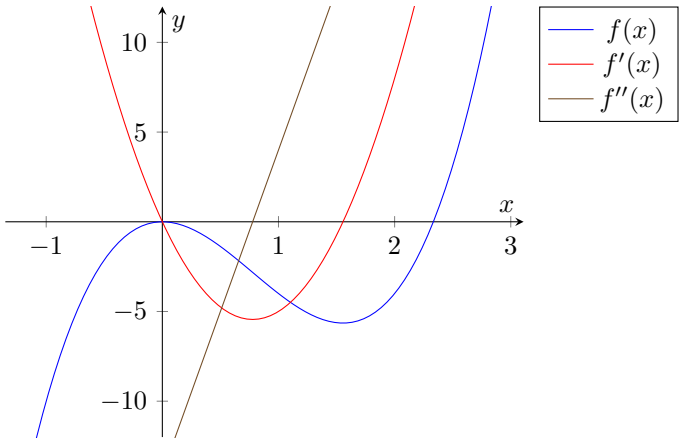
(a) Sketch f, f' and f'' in one coordinate system.

(b) Identify all of the minimum and maximum points and find its inflection points.

Solution:

(a) First, calculate the derivatives

$$\begin{aligned} f(x) &= -7x^2 + 3x^3 \\ f'(x) &= -14x + 9x^2 \\ f''(x) &= -14 + 18x \\ f'''(x) &= 18 \end{aligned}$$



(b) The function f has zeros at $x_1 = \frac{7}{3}$ and at $x_2 = 0$. The function f' has zeros at $x_3 = \frac{14}{9}$ and at $x_4 = 0$. The function f has a minimum at $(\frac{14}{9}, -5.64609053497942)$ because $f''(x_3) > 0$ and a maximum at $(0, 0)$ because $f''(x_4) < 0$.
