1. How big is the parabolic segment between the parabola $f(x) = \frac{x^2}{2}$ and the line $g(x) = 4 + x$?
Sketch a graph to visualize the desired area.

Solution: The functions intersect at $P_1(-2, 2)^T$ and at $P_2(4, 8)^T$. Thus, the area is

$$A = \int_{-2}^4 g(x) - f(x) \, dx = \int_{-2}^4 4 + x + \left(\frac{-1}{2}\right) x^2 \, dx = \left[\frac{1}{6} x (24 + 3x - x^2) \right]_{-2}^4 = 18$$

2. Given the function

$$f(x) = 10x^2 - 7x^3$$

- (a) Sketch f, f' and f'' in one coordinate system.
- (b) Identify all of the minimum and maximum points and find its inflection points.

Solution:

- (a) First, calculate the derivatives

$$f(x) = 10x^2 - 7x^3$$

$$f'(x) = 20x - 21x^2$$

$$f''(x) = 20 - 42x$$

$$f'''(x) = -42$$

(b) The function f has zeros at $x_1 = \frac{10}{7}$ and at $x_2 = 0$. The function f' has zeros at $x_3 = \frac{20}{21}$ and at $x_4 = 0$. The function f has a maximum at $(\frac{20}{21}, 3.02343159486017)$ because $f''(x_3) < 0$ and a minimum at $(0, 0)$ because $f''(x_4) > 0$.

3. Find all eigenvalues and eigenvectors of the matrix

$$A = \begin{bmatrix} 20 & 12 \\ 12 & -12 \end{bmatrix}.$$

Solution:

Calculate $A - \lambda I_2$:

$$A - \lambda I_2 = \begin{bmatrix} 20 & 12 \\ 12 & -12 \end{bmatrix} - \lambda \begin{bmatrix} 1.0 & 0.0 \\ 0.0 & 1.0 \end{bmatrix} = \begin{bmatrix} 20 - 1.0\lambda & 12.0 \\ 12.0 & -12 - 1.0\lambda \end{bmatrix}.$$

Then, calculate $\det(A - \lambda I_2)$.

$$\det(A - \lambda I_2) = -144.0 + (20 - 1.0\lambda)(-12 - 1.0\lambda)$$

Now, we solve $\det(A - \lambda I_2) = 0$.

The matrix A has the eigenvalues $\lambda_1 = -16$ and $\lambda_2 = 24$.
